

# Kirutma

A Figma-class standalone design tool for **macOS** and **Windows**.

## Status

**Phase 0 complete** — Tauri + React shell with Figma-dark UI layout. GPU canvas lands in Phase 1.

## Quick start

### Prerequisites

- [Node.js](#) 20+
- [Rust](#) 1.77+ (required for `tauri dev` / `tauri build`)
- [Tauri prerequisites](#) for your OS

### UI only (browser preview)

```
cd apps/desktop
npm install
npm run dev
```

Open <http://localhost:1420>

### Native desktop app

```
cd apps/desktop
npm install
npm run tauri dev
```

### Production build

```
cd apps/desktop
npm run tauri build
```

### Project layout

```
apps/desktop/
  src/                # React UI (toolbar, panels, canvas placeholder)
  src-tauri/          # Rust / Tauri backend
  public/
```

See [PLAN.md](#) for architecture and roadmap.

### Phase 0 deliverables

- ☒ Tauri 2 + React 19 + Vite + TypeScript
- ☒ Tailwind v4 + Figma-dark design tokens
- ☒ Editor shell: menu bar, toolbar, layers, properties, page tabs
- ☒ Zustand UI store + tool/zoom keyboard shortcuts
- ☒ Tauri security (CSP, capabilities, no Node in renderer)

- ☒ CI workflow (frontend + Tauri matrix build)
- ☐ wgpu test rect — **Phase 1** (requires Rust + GPU integration)
